

Email Defense Service

Overview

“With a simple, yet comprehensive management interface, excellent accuracy and distinctive features, the MX Logic Email Defense Service impressed us.”

EVERYTHING CHANNEL'S CRN TEST CENTER EDITORS

Don't be fooled. Spam is not just a nuisance. It is a productivity-killer, a carrier of network-debilitating viruses, and a way for cyber criminals to send more spam.

Be in control with MX Logic® Email Defense Service. Protect your organization with a managed service that analyzes the email that flows in and out of your organization - ensuring that spam, viruses and other malware remain outside your network.

Fully protect your email network with ease

Comprehensive email protection doesn't have to mean time-consuming implementation and administration. Here's why you should implement our economical, award-winning email security service:

- We block billions of spam, viruses, worms, and phishing threats outside the network every month
- Activation starts with a simple MX record redirection and then you fine-tune the system to your specifications through our intuitive web-based MX Control Console
- Managed services are easy-to-justify as operational expenses and ours eliminates the need to hire additional IT staff
- Disaster recovery options provide business continuity during emergencies

Productivity makes a comeback for you and your employees

With uncontrolled email frustrations a thing of the past, you can now focus on more high-priority projects.

- Effectively blocks 99.97% of spam with industry-leading low false positive rates
- Customizable end-user quarantine with management controls
- Less desktop cleanup and maintenance
- Web-based administration and easy-to-read dashboard reports
- No long-term contracts or hidden fees offer program flexibility

Get peace of mind with advanced technology

The Email Defense Service is like an insurance policy for your email network. Because it's built on advanced technology that is managed behind the scenes by the experts at MX Logic, you can feel confident that your network is being protected while you are handling more important projects.

- Multiple anti-virus engines and spam filtering techniques extend into the cloud for protection from viruses, worms and other threats
- Stacked Classification Framework® spam detection system uses a patented method of identifying and controlling spam via a voting algorithm
- Proprietary WormTraq® detection technology identifies and intercepts zero-hour mass mailing worms before they enter or leave a corporate network
- Signature-based virus scanning from three industry-leading anti-virus engines
- MX record masking technique conceals mail servers from the public Internet to protect businesses from denial of service attacks, dictionary harvest attacks and mail bombs
- Real-time, automatic updates performed 24/7/365 by Threat Center experts

Complete Protection
